

Intelligent Machinery Group

Shines at Annual

APEX TRADE SHOW

The Intelligent Machinery (IM) Group, based in the Marietta, Georgia facility, has just returned from their very busy and successful annual trade show – the IPC Apex Show® held once again this year in San Diego, California at the San Diego Convention Center. The show has become North America's largest gathering of electronics manufacturing professionals and this year's event proved no exception.

The latest in Yamaha's surface mount manufacturing technology and robotics factory automation was on display and the booth was a testament to Yamaha's heritage of knowledge and technology in the field since 1984. Featured in the booth was the new YRi-V multi-purpose optical inspection system for all markets that demand super-fast, high-accuracy 3D inspections. Additionally, the YRM20 High Speed Parts Mounter was shown with the new RM Head, boosting speed by over 20% from previous models.
